Repository: <https://github.com/Prabash-295/Job-Application-Tracker>

Overview

Job Application Tracker is a React-based web application designed to help users organize, manage, and track their job applications throughout different recruitment stages.

The application provides a centralized and responsive interface where users can add and manage job application records, search and filter applications, and track their application status efficiently.

Features

- ♦ Add and manage job application records
 - ♦ Track applications based on recruitment status
 - ♦ Search job applications efficiently
 - ♦ Filter applications based on relevant criteria
 - ♦ Form handling with input validation
 - ♦ Reusable React components for a modular structure
 - ♦ State management for dynamic application data
 - ♦ Responsive design for desktop and mobile devices
-

Tech Stack

Frontend

- **React.js**
- **JavaScript (ES6+)**
- **HTML5**
- **CSS3**

Tools

- **Git & GitHub** – Version control and source-code management
 - **VS Code** – Development environment
-

Project Structure

```
Job-Application-Tracker/

└─ README.md
...
```

Getting Started

Prerequisites

Make sure you have the following installed:

- Node.js
- npm
- Git

1. Clone the repository

```
git clone https://github.com/Prabash-295/Job-Application-Tracker
```

2. Navigate to the project directory

```
cd Job-Application-Tracker
```

3. Install dependencies

```
npm install
```

4. Start the development server

```
npm run dev
```

The application will be available at:

```
http://localhost:5173
```

Key Implementation Details

- Built the application using **React.js** with a component-based architecture.
 - Created reusable components to keep the application modular and maintainable.
 - Used **React state management** to handle application data and UI updates.
 - Implemented form handling for adding and managing job application records.
 - Added **form validation** to improve data accuracy and user experience.
 - Implemented **search functionality** to quickly find job applications.
 - Implemented **filtering functionality** to organize and view relevant applications.
 - Added **status-based application tracking** to monitor progress across different recruitment stages.
 - Used JavaScript ES6+ features for cleaner and more efficient application logic.
 - Designed a responsive interface using HTML and CSS.
-

Responsive Design

The application is designed with a responsive layout to provide a consistent user experience across:

-  Desktop
-  Laptop

-  Tablet
 -  Mobile
-

Deployment

The application is deployed using **Vercel**.

Live Application: <https://job-application-tracker-two-self.vercel.app/>

Future Improvements

-  Add user authentication and personalized accounts
 -  Add backend integration for persistent cloud-based data storage
 -  Add application deadline and interview reminders
 -  Add analytics and visual insights for application progress
 -  Improve filtering with additional job-related criteria
-
